NORWIN FORMS A STRATEGIC ALLIANCE WITH CANADIAN ENDURANCE WIND POWER

NORWIN AND ENDURANCE SIGN LICENSE AGREEMENT

The Danish technology company Norwin A/S has formed a strategic alliance with Endurance Wind Power Inc. – a Canadian manufacturer of advanced 5 to 50kW wind turbines.

The partnership gives Endurance the right to manufacture Norwin's Danish designed wind turbines. This agreement will allow Endurance to manufacture, market and install Norwin 225 kW wind turbines for the so-called "emerging markets" for mid-sized turbines.

Glenn Johnson, CEO of Endurance Wind Power Inc. in Vancouver, says " Norwin has built a solid background in the engineering advancement for the wind turbine industry and it is a pleasure to manufacture a product of this caliber to serve our growing customer's requests for turbines of this size. This will greatly extend our companies capabilities to be a leading manufacturer in the distributed wind industry".

Norwin's complete mid-size product line of wind turbines includes 200kW, 225kW, 500kW and 750kW turbines, manufactured over four continents. The fleet comprises over 500 globally installed turbines with total fleet operational hours exceeding 65 million.

"Our expertise and background lies in the design of our technology and it gives us great pride to work with a company like Endurance to provide the appropriate manufacturing and support capabilities required to develop, manufacture and erect a completely successful wind project", says Ole Sangill, CEO of Norwin A/S.

Norwin A/S is renowned for its innovative design and high profile within wind turbine technology and development in the wind turbine industry – projects like the Bahrain World Trade Center, among others. Norwin, having been around for more than 20 years, has built its company success through a unique model of licensed production of its wind turbine product line around the world.

Endurance Wind Power, based in Vancouver in British Colombia, Canada, manufactures advanced distributed wind turbines. Their product line of 5kW and 50kW wind turbines brings efficient, reliable, safe and quiet energy within reach for homeowners, farmers, businesses and institutions across North America, the United Kingdom and an expanding global market.
